

FREE IMPLEMENTATION ASSESSMENT

Business Central is not delivering what you were promised?

Get an honest second opinion from a team that specializes in rescuing troubled implementations. In a short, no-obligation assessment we find out what is actually wrong, why it went wrong, and what your realistic options are, and we put it in writing.

What we look at

- **Customizations and extensions:** code quality, upgrade safety, and whether you own the source.
- **Core setup:** posting groups, dimensions, costing, inventory, and number series.
- **Migrated data:** master data, open entries, and opening balances.
- **Integrations and apps:** failure points, conflicts, and duplicated functionality.
- **Performance, permissions, and licensing:** whether the system fits how you actually work.
- **Upgrade readiness:** will it survive the next major BC release?

What you get

- **A written findings report:** a few focused pages, not a hundred.
- **Severity and business impact** rated for every issue we find.
- **Root causes,** not just symptoms, so the same problems do not come back.
- **Clear options:** stabilize, remediate, or reimplement, each with a rough effort range.
- **A readout call** to walk through the findings and answer questions.
- **The report is yours to keep,** even if you take it to another partner.

How it works

1 Discovery call

60–90 minutes with your key stakeholders to understand the symptoms and original goals.

2 Environment review

Hands-on review of a sandbox copy. Read-only access, nothing live is touched.

3 Written findings

Issues, root causes, and options, delivered within 5–10 business days.

4 Readout call

One hour to walk through the findings. Next steps are entirely up to you.

Is this for you?

It is a good fit if you are live on Business Central and users rely on workarounds, month-end takes too long, reports cannot be trusted, costs keep climbing, or your relationship with the current partner has broken down.

Good to know

The assessment is free and carries no obligation. It is a diagnosis, so it does not include fixes, configuration changes, a line-by-line code audit, or a fixed-price quote. An NDA is available on request.
